This invention relates to a novel protein (and the gene which encodes it) which has a matrix binding region which assembles to a cell surface, or extracellular matrix surrounding the cell, and a leukaemia inhibitory factor region which suppresses cell differentiation of embryonic stem cells. The invention is useful for suppressing cell differentiation. The invention can be used for the efficient inhibition of embryonic stem cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel protein which has matrix binding region which assembles to c

differentiation. The invention thus enables efficient and continuous proliferation of embryonic stem cells. Therefore, embryonic stem cells can be prepared in large quantities and utilised for fundamental research and applications. The present sequence is that of the DNA sequence which encodes the protein of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         986
                                                                                                                                                                               The invention relates to isolated polynucleotides which are differentially-regulated in breast cancer. The methods and compositions of the present invention are useful for detecting, diagnosing, staging, monitoring, prognosticating, preventing and/or treating diseases and conditions relating to breast cancer, and may be used in gene therapy or antisense therapy. They can also be used in research, drug discovery, clinical medicine and forensic medicine. Sequences given in records ACC72012-ACC72074 represent polynucleotides of the invention that are differentially-regulated in breast cancer. NOTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           40
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               80

                                                                                                                                                                                                                                                                                                                                                                             ઠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes a new composition comprising an antisense oligonucleotide (ON) with low adenosine (up to 15%), which targets conclete acids involved in bronchoconstriction, allergies, and/or inflammation. The ON can have antiinflammatory, antiallergic, antialsthmatic, cytostatic and analgesic activities. The compositions are useful for the treatment of disease associated with inflammation, impaired airways, including lung disease and diseases whose secondary effects afflict the lungs of a subject. They can be used for treating c.g. impaired airways, including lung distress syndrome, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, pulmonary hypertension, emphysema, chronic obstructive continuary disease (CODP), and cancers such as leukaemias, lymphomas, carcinomas, and cancers which may metastasis to the lungs, including breast and prostate cancer. The reduction of the adenosine content of the consent and prostate cancer. The reduction of the adenosine content of the conchoconstriction and inflammation. AAA32313 to AAA35312 represent to invention, which correspond to SEQ ID No:1 to 2815, and then the last 185 cancers are also called SEQ ID No:1 to 2815, and then the last to more the previously named sequences. SEQ ID No:1 to 1860 (AAA2323 to AAA3392) are specifically claimed ONS from the present invention. N.B. Sequences given in the disclosure of the present invention. On the intention of the present invention. On the intention of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   521 receada a de ceracea a de consecue de 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  40

                                                                                                             ₽
                                                                                                                                                                                                                                                                         The invention relates to an isolated polypeptide comprising one of 127 sequences (appearing as ABO1288-ABO1414) designated as NOVX, an amino acid sequence which is at least 95% identical to NOVX or an amino acid sequence comprising one or more conservative substitutions in NOVX. Also included are nucleic acids encoding NOVX proteins, determining the presence or amount of NOVX or NOVX DNA in a sample (by introducing the sample to an antibody that binds campus to the polypeptide), determining the presence or amount of antibody bound to the polypeptide), determining the presence of amount of antibody bound to the polypeptide), determining the presence of cor predisposition to a disease associated with altered levels of expression of NOVX or NOVX DNA in a first mammalian subject, identifying an agent that binds to NOVX, identifying a potential therapeutic agent cor treatment of a pathology related to aberrant expression or aberrant physiological interactions of NOVX, screening for a modulator of activity of or of latency or predisposition to a pathology associated with NOVX, a vector comprising NOVX but an ending the vector (used to produce NOVX) and an anti-NOVX antibody. The NOVX nucleic acids and polypeptides are seful as a marker for cell or tissue type, and in diagnosing and treating pathologies, diseases, conditions or disorders associated with chronic disease, multiple sclerosis, infectious diseases, anorexia, cancerassociated cachexia, neurodegenerative disorders (associated with chronic diseases or Parkinson's disease, anotexia diseases, anotexia diseases, diseases, diseases, haematopoietic disorders, dyslipidaemias, and wasting disorders (associated with chronic diseases), immune disorders sasociated with chronic diseases. These may also be used to screen for molecules which inhibit or behance NOVX activity or function, and for detecting specific cell types. These may also be used in chromosome mapping, gene therapy, tissue treased.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         640
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               580

                                                                                                                                                                                         8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to human NOVX polypeptides and polynucleotides. The isolated nucleic acids can be used to express the novel proteins, to detect novel mRNA or a genetic lesion in a novel gene and to modulate its activity. It can also be used in gene therapy for treating or preventing a pathology associated with the protein or nucleic acid. The disorders include metabolic disorders, diabetes, obesity, infectious diseases, anorexia, cancer, neurodegenerative disorders, Alzheimer's disease, parkinson's disease, immune disorders and haematopoietic disorders. This sequence represents a human NOVX polynucleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                521 receachadeceraceadecrecarcardarecracarreracridecrecedadadecade 580

Claim 20; Page 108-110; 849pp; English.

The invention relates to an isolated polypeptide comprising one of 127 sequences (appearing as ABO1288-ABO1414) designated as NOVX, a mature form of NOVX an amino acid sequence which is at least 95% identical to NOVX or an amino acid sequence comprising one or more conservative substitutions in NOVX. Also included are nucleic acids encoding NOVX conservative in NOVX. Also included are nucleic acids encoding NOVX conservative in NOVX. Also included are nucleic acids encoding NOVX conservative in NOVX. Also included are nucleic acids encoding NOVX conservative in NOVX and the polypeptide, and determining the presence or amount of antibody bound to the polypeptide, and determining the presence or amount of antibody bound to the polypeptide, and determining the presence of amount of antibody bound to the polypeptide, determining the presence of corpression of NOVX DNA in a first mammalian subject, identifying a mount of antibody related to aberrant expression or aberrant for treatment of a pathology related to aberrant expression or aberrant physiological interactions of NOVX, screening for a modulator of activity of or of latency or predisposition to a pathology associated with NOVX, a vector comprising NOVX bulk, a cell comprising the vector (used to produce NOVX) and an anti-NOVX antibody. The NOVX nucleic acids and polypeptides are useful as a marker for cell or tissue type, and in diagnosing and treating pathologies, diseases, conditions or disorders associated with NOVX sequences, including cardiomyopathy, atherosclerosis, hypertension, congenital heart defects, prostate cancer, diabetes, metabolic disorders, congenital heart defects, prostate cancer, diabetes, and in diagnosing and disease, multiple sclerosis, infectious diseases, anorexia, cancer-cassociated achexia, neurodegenerative disorders, desired with chronic diseases. These may also be used to screen for molecules which inhibit or thoughts associated for the conservation, and for detecting associated in the conservation, and for detecting pathologic These may also be used in chromosome mapping, gene therapy, tissue typing, and in forensic biology. The present sequence encodes a NOVX

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1050
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1110
                                                                                                     The present invention relates to novel human cell adhesion and extracellular matrix proteins, CADECM-1 to CADECM-22, and their coding sequences (ACC00392-ACC00413 and ABR40104-ABR40125). The coding sequences and proteins are useful in diagnosing, treating and preventing disorders associated with aberrant expression of CADECM, such as immune system disorders (e.g. AIDS or allergies), neurological disorders (e.g. stroke, Parkinson's disease or epilepsy), developmental disorders (e.g. bown's syndrome or cerebral palsy), connective tissue disorders (e.g. systemic lupus erythematosus), genetic disorders (e.g. Alport's syndrome) or cell proliferative disorders (e.g. cancer or atherosclerosis)
                     New human cell adhesion and extracellular matrix proteins (CADECM), useful for diagnosing, treating or preventing disorders associated with aberrant CADECM expression, e.g. cancer, AIDS, atherosclerosis, allergies

The invention discloses a method for determining whether a compound can be used to treat prostate cancer and comprises measuring the expression level of a nucleic acid in prostate cancer cell sample in the presence and absence of the compound. Determining whether a compound can be used to treat prostate cancer comprises identifying the compound as useful for prostate cancer treatment when the expression level of the nucleic acid in the presence of the compound. Bless than the expression level of the nucleic acid in the absence of the compound. Prostate cancer is usually treated by androgen withdrawal, by castration or through the use of an anti-androgenic drug. Bicalutamide (casodex) is one such anti-androgenic compound or testosterone, can be used to treat the prostate cancer can be made on a patient by patient basis. The sequence presented is a gene which is more highly expressed in testosterone treated prostate
                                                                                                                                                                                                                                                                                          Determination of whether compound is useful for prostate cancer treatment comprises measuring expression level of specific nucleic acid sequence in prostate cancer cell sample in the presence and absence of compound.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            580
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      640

This is the 5' sequence of the clone insert
Clone from 5. Wiemann, Molecular Genome Analysis, German Cancer
Research Center (DKF2); Email 8. Wiemann@dkfz- heidelberg.de;
sequenced by EMBL (European Molecular Biology Laboratories,
Heidelberg/Germany) within the cDNA sequencing consortium of the
German Genome Project.
No sl sequence available.
This clone (DKF2686C067) is available at the RZPD in Berlin.
Please contact the RZPD: Ressourcenzentrum, Heubnerweg 6, 14059
Berlin-Charlottenburg, GERMANY; Email: clone@rzpd.de.

// Note="Organ: Bye; Vector: pSport1; RNA was extracted from primary human pericytes in culture. A directionally cloned cONA library in the pSpoRil vector (Invitrogen) was constructed at Bioserve Biotechnology (Laurel MD) essentially following the protocols of the SuperScript Plasmid System full details of which are contained in the manufacturer's Instruction manuel (http://www.lifetech.com/). First strand synthesis was carried out using a Not I primer-adapter [5'-pgACTAGATCAGAGGGCGCC(T)15-3']. cDNA was cloned in Not I/Sal I sites. EST analysis was performed at the NIH Intramural Sequencing Center (NISC)."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         EST 16-MAY-2004

/ note="Organ: eye; Vector: pT7T3-Pac (Pharmacia) with a modified polylinker; Site 1: EcoR I; Site 2: Not I;

UI-8-EJ0 is a subtracted cDNA library constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tags for this library are: fetal eyes,

AGAATCAAGA; lens, CGATTAGCGA; eye anterior segment,

AATGCCGCAT; optic nerve, CCATTAGCGG; Retina Foveal and Macular, GTCC; RPE and Choroid, ACCTA. This library was created for the program, Gene Discovery in the Visual System, supported by National Eye Institute (NEI):"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 5, P

Sequence 176, Application US/09404879A

Patent No. 6468546

GENERAL INFORMATION:

APPLICANT: Mitcham, Jennifer L.

APPLICANT: Algate, Paul A.

TITLE OF INVENTION: DIAGNOSITIONS AND METHODS FOR THE THERAPY AND TITLE OF INVENTION: DIAGNOSIS OF OVARIAN CANCER

FILE REPERENCE: 210121.462C2

CURRENT FILING DATE: 1999-09-24

NUMBER OF SEQ ID NOS: 393

SOFTWARE: FASTSEQ for Windows Version 3.0
